Skills

- AWS DevOps Engineer
- AWS Solution Architect
- Databricks Platform Administration
- MLOps
- Iaac & PaaS

Education

Bachelors: Electronics and Telecommunications Engineering.

MSc: Data Science (2022 –) Arden University, Coventry.

Languages

English – Native

Dutch – B1/B2

French – A1

Professional Summary

Accomplished Sr. Platform (DevOps) Engineer & Cloud Consultant with 10+ experience in delivering cloud-agnostic solutions and designing public cloud services and implementation. Demonstrated expertise in hybrid cloud architecture, multi-cloud applications, and cloud economics, complemented by proficiency in Terraform, Pulumi, CloudFormation as IaaC services. Expert in Terraform-driven infrastructure at scale, AWS landing zones, secure-by-design architecture and CI/CD automation. Extensive knowledge of Telecom domain & systems. Strong Python developer with practical experience integrating **AWS GenAI services (Bedrock, agent-based developer tooling)** into real-world platform workflows.

Technical Summary

- **Cloud:** AWS & multi-cloud
- **IaaC:** Terraform, Terragrunt, Vagrant, Ansible, Chef
- **Networking & Security**: VPC, NAT, IGW, Transit GW, VPC Peering, AWS DC, Route 53, CloudFront, Well Architected AWS Landing Zones
- **DevOps & CI/CD**: GitHub, GitHub Actions, GitLab, Jenkins, Git, CI/CD automation
- **Containers & Platforms**: EKS, Kubernetes, Docker & OpenShift - PaaS services
- **Monitoring & Observability**: Grafana, Prometheus, Dynatrace, ELK, Splunk
- **Languages:** PowerShell, Bash, Python, Go, Ruby
- **Ways of Working**: Agile, Scrum, Kanban

Experience

Sr. DevOps (Platform) Engineer & Cloud Consultant

Proximus Group | Mar 2023 – Current

- Designed and evolved **enterprise-grade AWS Landing Zones** aligned with **Well-Architected Framework**, enabling secure, multi-account, multi-team cloud adoption.
- Built **self-service AWS platform capabilities** that abstracted complexity for internal DevOps teams, reducing cloud onboarding time by **40–60%**
- Delivered standardized, reusable platform components for **IAM, networking, logging, monitoring, security baselines, and cost governance**.
- Built and operated CI/CD pipelines in AWS DevOps for infrastructure and data platforms, improving deployment reliability and speed to market.
- Delivered production monitoring and observability using Grafana, Prometheus, Dynatrace, ELK, and Splunk.
- Designed and implemented **event-driven, serverless platforms** using **AWS Lambda, Step Functions, S3, EventBridge, and API Gateway**.
- Built **reusable serverless templates and blueprints** consumable by multiple teams via self-service pipelines.
- Integrated **AWS Bedrock** into platform services to enable:
    - AI-assisted developer workflows (code generation, validation, and remediation suggestions)
    - Intelligent platform automation (policy checks, configuration validation, documentation generation)
- Prototyped **agent-based developer tooling (Agentic IDE concepts)** that reduced repetitive operational tasks.
- Ensured **secure GenAI adoption** by implementing data isolation, IAM controls, and governance patterns

Big Data and Sr. DevOps Data Engineer / Architecture

Telenet BVBA | May 2019 - Feb 2023

- Big data Platform engineer with DevOps functional experience.
- Responsible for designing and development of CI/CD pipeline on Cloud.
- Derive insights on key metrics (KPIs) and performance indicators.
- Work closely with business and cross-functional teams for delivering release cycles.
- Work in Agile / Scrum framework.
- Designed and operated CI/CD platforms for big data workloads in enterprise environments using Terraform and automation-first DevOps practices.
- Developed Terraform and Ansible automation enabling repeatable, complaint infrastructure provisioning.

This information doesn't represent Proximus' position and is sent for personal use only.

- Collaborated with cross-functional teams in Agile/Scrum delivery models to deliver stable production releases.

This information doesn’t represent Proximus’ position and is sent for personal use only.

- Provided architectural recommendations to improve performance, resilience, and ROI of delivery platforms.

Assistant Vice President (AVP)

JPMorgan Chase & Co. | Jun 2011 - May 2019

- Developed and implemented automation/self-healing scripts coded in Python / BASH / PowerShell / JavaScript.
- Configure and maintain thousands of systems using Chef Cookbooks within an Atlassian build framework (JIRA, Confluence, Stash, Bamboo, and Git).
- Configure and maintain Amazon Web Services (AWS) Cloud Computing environments to meet growing demands of CI/CD pipeline volume.
- Collaborate closely working with Development, QA and Production teams to design, implement and administer DevOps solutions for .NET and Java builds using Microsoft TFS and Jenkins.
- Hands-on experience working in Agile / Scrum / Kanban practices.
- Successfully rolled out CI/CD pipeline for Java and .NET applications which reduced time-to-market (TTM) constraint by 25% using Chef, Ansible, Octopus Deploy and Jenkins.
- Designed and Development experience to on-board new applications to Amazon AWS or Microsoft Azure based on capacity/client needs.
- Good experience in working with GitHub tools - Atlassian Bitbucket.
- Lead migration project to convert SCM from subversion to GitHub.

Interests

- Hobbies
- Fine arts, literature, and book reading. Awards and Recognition
- Consecutive Top-Notch award for 2017 and 2018.
